

CASE TOOL MATRIX

The choice of the modeling environment is one important element to model-based systems engineering (MBSE). The feature list of a particular tool is not sufficient to judge on the tool's appropriateness for your organization. A crucial factor is the ability to integrate the modeling tool into the legacy environment. Interoperability and customizability are as important as usability and standard conformity.

Do this:

- Identify modeling users, stakeholder and related requirements
- Define the crucial modeling use cases as well their in- and output
- Identify workflows and interfaces with other engineering tools
- Evaluate tool candidates with appropriate test cases
- Make your MBSE environment to subject of continuous improvement

Do not do that:

- Buy a tool license based on the tool's feature list
- Apply the software modeling tool for systems engineering
- Nice diagrams are more important than the data underneath
- Underestimate the importance of usability and standard conformity
- Let IT purchase the licenses

oose Innovative Informatik eG offers support to your organisation during the introduction of MBSE. We may support with requirements to the modeling environment, during evaluation of respective solutions, by backing pilot projects or the customization of development processes and methods.

From Knowledge to Mastery

	Miscellaneous
Tool name [if applicable, alternate	
name]	Please describe outstanding characteristics of your tool
Astah	Usability, Extensively, Abundant online contents, excellent customer support
Enterprise Architect [EA]	Enterprise Architect is a comprehensive UML analysis and design tool for UML, SysML, BPMN and many other technologies. Covering software development from requirements gathering through to the analysis stages, design models, testing and maintenance. EA outfits your entire team, including analysts, testers, project managers, quality control staff and deployment team, for a fraction of the cost of some competing products. EA is a multi-user, Windows-based, graphical tool designed to help you build robust and maintainable software. It also features flexible and high quality documentation output.
Observed v	
Rhapsody	Complete modelling environment from Enterprise Architecture down to SW code gneration. With complete set of OSLC integrations via RMM to requirements, test, config and change management.
MacA&D (Mac OS) WinA&D (Windows OS)	Scriptable Reports with full control over content and format and access to all requirement, dictionary and diagram data. Large team development features like Team Documents, Namespaces, Import/Export, Document Templates, Adhoc Reports and Extensive Customization
MagicDraw	Strict support of underlying UML/SysML/BPMN/UAF metamodel. Validation of model completeness and correctness. Outstanding usability based on major work scenarios, automation where possible. Customization of metamodel and UI, based on customer processes.
MetaEdit+	Support any modeling need and code generation target with domain-specific languages (or adapt OMG languages to your need)
Modelio	 The Modelio Constellation server enables you to easily share and re-use your models, and to establish the governance of your enterprise repository. Requirement analysis: Requirements are an integral part of your models. They can be traced, linked to your models and used in impact analysis. Multi-standard: Modelio integrates all the latest modeling standards and actively participates in the interoperability format used to guarantee the exchange of models between different tools. Support & Consultang: Modeliosoft's international support team, its network of partners around the world and its consultants will help you make a real success of your project, including at the international level. SOFTEAM, Modeliosoft's parent company, has 600 architecture and development consultants, and 200 consultants in project management, modeling, methods and approaches. The Open Source ecosystem: The presence of an active contributing community ensures zero editor "lock-in", and provides numerous developments and significant user feedback. The forum is a valuable way to share problems and solutions. Since 1990, the users of Objecteering and then Modelio have been ensured backward compatibility and been assisted in the update of their repositories. SOFTEAM ensures customer follow-up and solution sustainability which is unrivaled on the market.
objectiF RPM PragmaDev	traceability along the entire application life cycle (even to code),agile/hybrid planning, continuous testing
Studio	The tool includes a full testing environement: to check non regression on the model, or to verify an implementation is conform to the model.
PTC Integrity Modeler	Open and highly flexible implementation of UML-based modeling, true parallel working in one model, unique Model-in-model concept, Model-based Integration Hub using OSLC and HTML, Connected Systems and System-of-Systems Development by our Thingworx integration
Sinelabore	SinelaboreRT was built especially for embedded software developers. It focuses on just one task: Generation of readable and maintainable code from hierarchical UML state - and from activity diagrams. With its unique features the tool covers well the requirements of embedded real-time and low-power application developers. With its C++/Python/C# and Swift language backends is also a perfect tool for developers of server or desktop applications.
UML Lab	Agile reverse- and round-trip engineering using the same customizable code templates for generation and reverse engineering

Se
